**RE: Sinoboom approval**

Dear Jason

Sinoboom provides secondary guarding on all slab scissorlifts as a standard feature for 2024 with the Protective Shield system being one of our approved systems. We have worked with Protective to offer two versions of the system as standard configuration. The first system is the standard field version of Shield which we use on our RT scissor lifts and the second system is a specifically adapted version which is incorporated into our slab scissor control system which was developed in a joint partnership with Protective and Sinoboom.

Both systems have been approved for use in the field by Sinoboom on the basis that we are satisfied that the systems have no adverse effects on our control systems. This letter only addresses the installation and use of the system on Sinoboom products and at no stage is it providing any form of approval of the internal workings of the shield system itself. This approval is only valid if the systems have been installed by accredited installer approved by Protective and in accordance with the installation instruction developed in conjunction with Sinoboom.

If you require any further information, please do not hesitate to reach out to me at any time.

Yours sincerely

Mitch Ely  
General Manager
